PROBLEM SOLVED

DO YOUR CUSTOMERS CARRY HEAVY LOADS?

At SSA we have been able to solve the heavy load requirements of Mazda BT50/Ford Ranger customers with our spring made to our unique design. This has given the over slung spring added strength in its low camber design.

NOTE: Loads are to be kept within the vehicle's legal limits. See how this was achieved in this featured video.

PROBLEM SOLVED

DO YOUR CUSTOMERS CARRY HEAVY LOADS?

At SSA we have been able to solve the heavy load requirements of Mazda BT50/Ford Ranger customers with our spring made to our unique design. This has given the over slung spring added strength in its low camber design.

NOTE: Loads are to be kept within the vehicle's legal limits. See how this was achieved in this featured video.

Open both valves 3 full turns

When Replacing Suspension on a Toyota Prado 150 Series/Landcruiser 200 Series or Lexus LX Series vehicles fitted with Toyota's Kinetic Dynamic Suspension System (KDSS), also referred to by Toyota as a 'hydro-mechanical semi active anti roll bar' always abide by the correct fitting procedure as follows:

1. Suspend vehicle on 2-post type chassis hoist allowing wheels to hang.

2. Locate the KDSS valve housing

NOTE: The valve housing is located on the left-hand side of the vehicle, on the inside of the chassis rail, roughly half way between the front and the back of the vehicle.

3. Using a 5mm hex key, open the 2 levelling valves 3 full rotations anti-clockwise. (Access is from underside of the KDSS valve)

NOTE: The KDSS system is now open and the sway bar ends should be able to be freely manipulated with little effort, allowing spring / strut removal and installation.

THE VEHICLE **MUST NOT** BE **DRIVEN** WITH THESE **VALVES OPEN** AS THIS WILL **COMPROMISE** THE **SYSTEM** AND **RENDER** THE VEHICLE **UNSAFE TO DRIVE**.

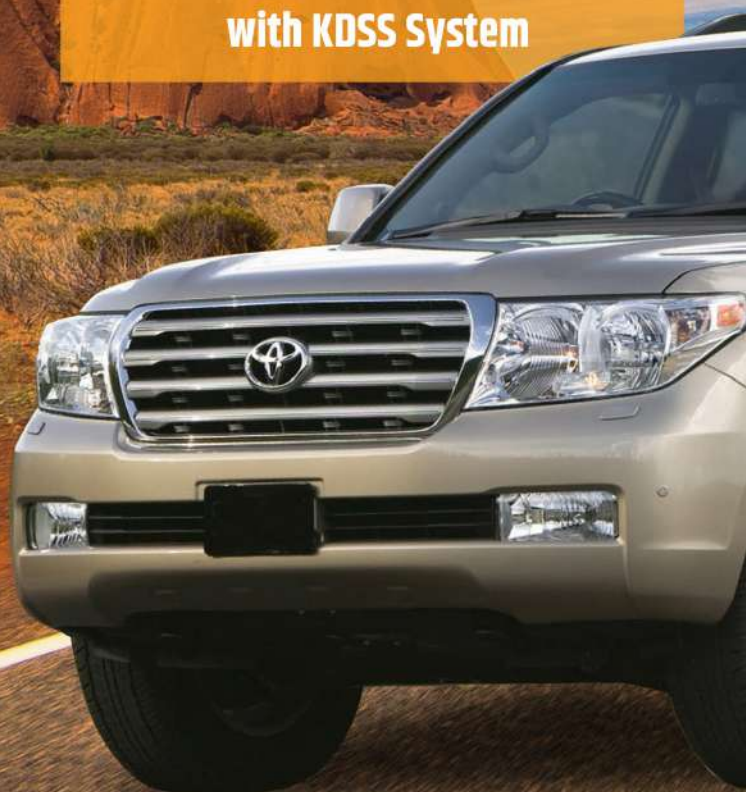

4. With the vehicle sitting on level ground, close both KDSS levelling valves by turning them in a clockwise direction and then tightening.
